

ShuddhiCheck AI – Spain Phase II Readiness Report

1. Introduction: Building from Spain's National Strategy

Spain's Mental Health Strategy 2022–2026 sets the stage for comprehensive, community-driven mental health reform. With national efforts focused on suicide prevention, health education, and strengthening healthcare professionals, the country is well-positioned for ShuddhiCheck AI's scalable, culturally adaptive deployment.

2. Opportunities for ShuddhiCheck AI

- Strong public trust in Spain's national health system (SNS)
- National commitment to digital transformation and mental health equity
- Clear alignment with GDPR and EHR-based systems
- Demand for suicide triage, risk assessment, and multilingual self-help tools

3. Multilingual and Regional Adaptation

While Castilian Spanish is the national language, Spain officially recognizes multiple regional languages:

- Catalan (Cataluña, Balearic Islands, Valencia)
- Basque / Euskera (Basque Country, parts of Navarre)
- Galician (Galicia)
- Aranese (Catalonia – Val d'Aran)

ShuddhiCheck AI will respect regional linguistic identity by ensuring core triage and user interfaces are translated into both national and regionally co-official languages in a phased rollout.

4. Compliance and Integration

- GDPR-compliant backend across all modules
- Integrated audit trails, consent capture, and notification systems
- Alignment with the Digital Health Strategy of Spain (Estrategia de Salud Digital)
- Compatibility with SNS data governance and public health IT frameworks

5. Shuddhi's Spain Rollout Plan

- Phase I pilots in Madrid and Barcelona public health sites
- Partnerships with national mental health agencies and regional SNS units
- Primary interface in Castilian Spanish
- Phase II-b translation rollout for Catalan and Basque interfaces
- Stakeholder feedback loop from SNS clinicians, schools, and care workers

6. Closing Commitment

ShuddhiCheck AI arrives not to replace Spain's strong public care systems — but to complement and empower them. With respect for language, law, and local values, we offer AI-driven solutions that walk with Spain's families, professionals, and policymakers.

Together, we can create a future where digital tools don't just process compliance — they protect lives.
